Abstracts

The global Smart Card For Certification market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A dominant type of smart card for certification is the chip card based on the EMV (Europay-Mastercard-Visa) standard. This type of smart card is widely used in the banking and finance sector to provide higher security and counterfeit protection, replacing traditional magnetic stripe cards. With the continuous development of biometric technology, some smart cards for authentication are beginning to integrate biometric authentication technologies such as fingerprint recognition, iris recognition or face recognition. The trend in smart card design for authentication is real. With the popularity of mobile devices, some smart cards for authentication are beginning to support authentication on mobile devices, such as through the NFC function of mobile phones. The chip technology of smart cards for authentication is constantly being upgraded with more advanced encryption algorithms and hardware security modules to defend against all kinds of identity theft and piracy.

The Smart Card For Certification is a trusted platform module. It is a device that can generate, encrypt and decrypt keys independently. It has a separate processor and storage unit that stores key and feature data and provides encryption and secure authentication services. This protects business privacy and data security.
