Abstracts

According to our (Global Info Research) latest study, the global Smart Charging Pile IoT market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

With the popularity of new energy vehicles, the construction of charging infrastructure has received more and more attention. As an important part of the charging infrastructure of new energy vehicles, smart charging piles have become the main way of charging new energy vehicles. However, the safety of charging piles has also attracted much attention. In order to better ensure the safety and reliability of charging piles, many charging pile manufacturers have begun to develop intelligent charging pile monitoring solutions to improve the safety and reliability of charging piles.

The intelligent charging pile monitoring solution mainly includes charging pile monitoring software and charging pile hardware equipment. The charging pile monitoring software can perform real-time monitoring and data analysis on the charging pile, including information such as the power of the charging pile, charging speed, and charging capacity. Charging pile hardware equipment includes charging pile controller, charging gun, charging interface, etc. These devices can be connected to charging pile monitoring software through the network to realize real-time monitoring and data analysis.

The EV charging market is building a whole new infrastructure, which will be tightly integrated with electricity distribution networks. Building such an infrastructure does not happen overnight. With a compound annual growth in the range of 30% that infrastructure will become a significant player in its own rights before long. Looking

towards 2024, we will see > 5Mio charging points in Europe and > 2 Mio in North America.

Use of installed charging points is accelerating, in some cases doubling every year. The faster this acceleration, the more the new infrastructure will depend on highly available and secure IoT connectivity. It is a truly mission-critical infrastructure, and for this reason, Charging Point Operators are requesting the best possible connectivity at each location.

Electric vehicle charging is an integral part of the total ecosystem. Charging Point Operators, Mobility Service Providers (Charging Service Providers), Electricity Distribution System Operators and Energy Service Providers stand to benefit from data generated by charging infrastructures. As are service providers of shared e-car or micromobility services, automotive OEMs, car parking operators, logistic hubs of all kinds, battery vendors moving towards a “Battery as a Service” business model, and others.
