## Abstracts

According to our (Global Info Research) latest study, the global Smart City IoT Platform market size was valued at US\$ 3351 million in 2025 and is forecast to a readjusted size of US\$ 5138 million by 2032 with a CAGR of 6.1% during review period.

A Smart City IoT Platform is an integrated system that uses sensors, communication networks, cloud platforms, big data analytics, and artificial intelligence to enable real-time sensing, data collection, remote monitoring, and intelligent management of urban infrastructure, public services, and city operations. It typically covers applications such as smart transportation, smart lighting, public safety, smart parking, environmental monitoring, smart water management, smart energy, waste management, and emergency response. By connecting urban devices, infrastructure, and management platforms, it improves operational efficiency, public service quality, and resource utilization in cities.

Smart City IoT Solutions will develop toward platform-based deployment, higher intelligence, low-power connectivity, and city digital twins. As urban management shifts from isolated device monitoring to citywide data collaboration, solutions will place greater emphasis on multi-system integration, cross-department data sharing, real-time alerts, and AI-assisted decision-making. Future systems will increasingly combine 5G/6G, NB-IoT, LoRa, edge computing, AI vision, digital twins, and cloud platforms to enable unified scheduling and management of transportation, energy, water, security, and environmental systems. Data security, privacy protection, device compatibility, low-cost deployment, and long-term operation and maintenance will become key factors for project implementation, driving smart city IoT from pilot projects toward large-scale operation.
