According to our (Global Info Research) latest study, the global Smart Contracts Software market size was valued at USD 324.2 million in 2023 and is forecast to a readjusted size of USD 1393.5 million by 2030 with a CAGR of 23.2% during review period.

Smart contracts are protocols used to facilitate, verify, and/or enforce contracts on a digital medium. These self-executing contracts can be safely executed and authenticated without third parties and cannot be reversed. Each transaction is documented on a blockchain or distributed ledger system as well, increasing traceability and transparency across the ledger.

Companies use smart contracts to improve the security of transactions. Smart contracts are heavily encrypted and provide superior protection over standard encryption technology. Their self-executing nature can speed up transactions and increase accuracy as well. Smart contracts also improve transparency since requirements are well defined and transactions are all documented and irreversible.

Some blockchain platforms and blockchain payment solutions offer smart contracts or allow users to create, manage, and execute transactions digitally.
