Smart Display Control Card refers to board-level electronic control hardware used within LED display systems to receive, process, store, transmit and distribute video, image, text and operational data. The product is commonly supplied as a sending card, receiving card, asynchronous control card, synchronous-asynchronous dual-mode card or embedded multimedia control module. A typical unit consists of a multilayer printed circuit board integrating an SoC, FPGA or MCU, memory and storage devices, Ethernet and video-interface components, communication modules, power-management circuitry, connectors and embedded firmware. Its principal functions include video decoding, pixel mapping, scan-mode adaptation, grayscale processing, color calibration, brightness adjustment, content scheduling, screen monitoring, redundancy management and remote content distribution. Smart Display Control Card is mainly deployed in commercial LED signage, transportation information displays, smart-city terminals, corporate displays, stadium and stage screens, broadcast studios, control rooms and XR virtual-production systems.
