As a key component of automobiles, brake boosters are used to increase pedal assistance during braking. Traditional vacuum booster brakes use the pressure difference between the air entering the rear chamber of the booster and the vacuum to generate the assistance required for braking. This report mainly studies the market of smart electric brake boosters. Smart electric brake boosters are devices that use motors to assist traditional brake systems to achieve the boost function during braking. They combine electronic technology and the principle of brake assistance to provide drivers with a more efficient, precise and comfortable braking experience.
