## Abstracts

According to our (Global Info Research) latest study, the global Smart First Aid Solution market size was valued at US\$ 32.93 million in 2025 and is forecast to a readjusted size of US\$ 45.71 million by 2032 with a CAGR of 5.1% during review period.

Smart First Aid Solution refers to a digital and intelligent management system that integrates emergency medical equipment, wearable monitoring terminals, dispatch and command systems, and medical institution information systems based on the Internet of Things, artificial intelligence, big data, cloud computing, and communication technologies. This system enables the entire process of managing sudden illnesses or accidental injuries, from on-site discovery, alarm location, emergency guidance, resource dispatch, to pre-hospital emergency care. Its core objectives are to shorten emergency response time, improve on-site treatment success rates, and build a collaborative rescue network covering the public, emergency centers, and hospitals.

Against the backdrop of high incidence of cardiovascular diseases, an aging population, and frequent public safety incidents, Smart First Aid Solution is upgrading from traditional 'passive response' to 'proactive prevention + rapid response.' With the widespread adoption of AEDs, the development of 5G communication, location services (LBS), AI-assisted diagnosis, and telemedicine technologies, the emergency medical system will gradually achieve precise location, intelligent dispatch, and real-time remote guidance. Increased government investment in public health and the advancement of smart city construction will further accelerate industry implementation. In the future, this field is expected to become a key infrastructure in medical informatization and public safety systems, but in the short term, it remains constrained by equipment coverage, public training levels, and cross-system collaboration capabilities.
