According to our (Global Info Research) latest study, the global Smart Freight Elevators market size was valued at US\$ 9257 million in 2025 and is forecast to a readjusted size of US\$ 20340 million by 2032 with a CAGR of 12.0% during review period.

Smart Freight Elevators are equipped with latest technology such as Internet of Things (IoT), Artificial Intelligence (AI), cloud computing, and various hardware and software. These systems together allow for proactive, condition-based analysis, predictive maintenance, real-time data sharing, destination prediction, enhanced security, and many other features. A smart elevator is energy efficient, user friendly, secure and safe, and experience minimum downtime.

Digital closed-loop maintenance, monitoring, and information systems are the future of elevator maintenance. More over, Green engineering is to deliver optimal performance by capturing excessive energy, which is often wasted in the form of heat. The system transfers the captured energy back into the building's electric grid for reuse in smart elevator market. Building projects consume nearly 40% of the global energy, with elevators consuming between 2% and 10%. By modernizing the building with smart solutions, this number can be brought down to 1-5%. The green engineering concept offers the opportunity for the players to supply energy-efficient solutions to reduce the operational cost through automation and modernization of the existing elevators.
