Abstracts

Smart gas meters work with an integrated smart energy monitor to provide operational flexibility and effectively track the consumption and associated costs. These meters can feasibly track and modulate the consumption of gas and calculate the overall consumption and supply costs to ensure cost benefits and curb energy waste.

Scope of the Report:

A smart gas meter not only measures gas flow but use wireless communication to connect to local or wide area networks allowing infrastructure maintenance, remote location monitoring and automatic billing. It also has leakage and shock detection systems that can greatly increase safety by detecting emergency situations and enabling the immediate and remote cutting of the gas flow in case of seismic activity or gas leakage.

The worldwide market for Smart Gas Metering Systems is expected to grow at a CAGR of roughly 31.0% over the next five years, will reach 6650 million US\$ in 2023, from 1320 million US\$ in 2017, according to a new GIR (Global Info Research) study.
