Abstracts

Smart haptic driver is a driver IC with perfect smart haptic and linear motor (LRA) protection algorithm. The internal boost converter can increase the power supply voltage, which provides ample space for greatly improving the linear motor's tactile effects and screen sound characteristics. The adaptive haptic enhancement algorithm is different from similar solutions in that it uses feedback to accurately calculate temperature, amplitude, and resonance frequency at the same time, so that the smart haptic driver can adapt to changes in linear motor conditions and environments. The product supports screen sound, audio to touch and short press use cases.
