The global Smart Health Booth market size is expected to reach \$ 286 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

In 2025, the global production of Smart Health Booth reached 18 thousand units, with an average price of USD 9,500 per unit, total production capacity of 24 thousand units, and an average gross margin of 30%.

Smart Health Booth is a self-service health examination terminal that integrates multiple health monitoring devices and telemedicine systems. It can operate in unattended or minimally staffed environments and is used to measure health indicators such as blood pressure, heart rate, blood oxygen, body temperature, body composition, height and weight, and ECG. The data can be uploaded to medical platforms via the internet to enable remote consultation, health assessment, and chronic disease management. The equipment is typically deployed in hospitals, community health centers, pharmacies, shopping malls, airports, and corporate campuses for basic health screening and telemedicine services.

Upstream includes medical sensor and module suppliers (blood pressure, blood oxygen, ECG, temperature sensors), display and touchscreen suppliers, camera and video communication system providers, software and cloud platform providers, as well as kiosk structure manufacturers. Midstream consists of smart health booth manufacturers and system integrators. Downstream customers include hospitals, community healthcare centers, pharmacy chains, health check centers, insurance companies, corporate health management organizations, and government public health programs.
