## Abstracts

The global Smart Health Checkup Cabin market size is expected to reach \$ 2285 million by 2032, rising at a market growth of 8.3% CAGR during the forecast period (2026-2032).

In 2025, the global output of Smart Health Checkup Cabins reached 68,000 units, with an average selling price of USD 18,500 per unit, production capacity of 85,000 units, and a gross margin of 42%.

A Smart Health Checkup Cabin is a self-service health screening terminal that integrates multiple basic health measurement devices and a digital management system. It typically enables users to complete vital sign collection such as blood pressure, heart rate, body temperature, SpO<sub>2</sub>, body composition, and height/weight within an enclosed or semi-enclosed space, with optional modules including ECG, blood glucose, and urine testing. It also supports data uploading to cloud platforms or healthcare information systems for health record creation, chronic disease screening, risk alerts, and remote healthcare service linkage, and is widely deployed in community healthcare, public health institutions, hospital checkup centers, corporate campuses, and public service locations.

The Smart Health Checkup Cabin market is in a phase of parallel demand expansion and broader deployment. On one hand, increased digital investment in primary healthcare and public health systems for chronic disease screening and health management is driving installations in community and public service settings. On the other hand, corporate wellness programs, smart campus development, and patient flow management needs in hospital checkup centers are accelerating the upgrade from standalone measuring devices to integrated “health checkup service terminals.” The

market is clearly tiered: entry-level products focus on basic vital signs, while mid-to-high-end solutions emphasize multi-parameter testing, system integration, and telehealth connectivity. Commercially, solutions are increasingly delivered as a bundled model combining hardware sales, maintenance services, and data platform capabilities.
