The global Smart Homework Lamp market size is expected to reach \$ 758 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Smart homework lamps are intelligent desktop lighting devices that integrate LED eye-protection lighting, AI cameras, voice interaction, OCR image and text recognition, large language models, and remote parental control technologies. Primarily designed for primary and secondary school students' homework scenarios, they offer functions such as eye-protection lighting, homework correction, explanation of difficult problems, voice Q&A, posture correction, study timer, and remote companionship. They are a typical product combining smart education and smart hardware.

The core differences between smart homework lamps and ordinary desk lamps lie in AI interaction, educational attributes, parental control, visual perception, and ecosystem integration.

Upstream core components of smart homework lamps include LED chip beads, main control MCU/SoC, image sensors, proximity sensors, ToF, voice wake-up chips, storage, touch control, WiFi/Bluetooth modules, driver power supplies, and AI algorithms. Downstream applications are mainly in student homes, offices, school classrooms, libraries, and training institutions.

In 2025, global sales of smart homework lamps reached 3.55 million units, with a production capacity of approximately 4.3 million units. The average selling price was \$147 per unit, and the average gross profit margin was 25%-35%.
