Smart Inspection Drone refers to intelligent unmanned aerial vehicles equipped with imaging sensors, autonomous flight systems, artificial intelligence algorithms, and data analysis capabilities for automated inspection tasks. These drones can collect visual, thermal, and environmental data to identify equipment conditions, structural defects, and operational risks. They are widely used in power grids, oil and gas facilities, industrial plants, transportation infrastructure, agriculture, and security monitoring. The product scope includes autonomous inspection drones and AI-enabled aerial inspection platforms, excluding ordinary consumer drones without inspection functions.

The industry chain of Smart Inspection Drone includes upstream components, midstream drone manufacturing, and downstream inspection applications. Upstream suppliers provide flight controllers, batteries, motors, cameras, sensors, communication modules, and AI computing components. Midstream manufacturers conduct drone design, hardware integration, software development, autonomous control system integration, and performance testing. Downstream applications include energy
