## Abstracts

According to our (Global Info Research) latest study, the global Smart IoT Modules market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Smart module, with the characteristics of communication module, supports 5G/4G/3G/2G WAN access. At the same time, the smart module comes with complex operating systems such as Android and HarmonyOS, and has an open and secure software environment; it has its own CPU and GPU computing power, is highly integrated, and supports GNSS, Wi-Fi 4/5/6, BT/BLE . The smart module has rich interfaces, which can expand complex peripherals, such as: LCM/TP/Camera and other peripheral requirements, as well as multi-channel UART/IIC/SPI, which is convenient for users to connect various Sensors, NFC, port scanning, and fingerprint recognition. and other external expansion equipment.

The IoT Smart Module has high computing power and can perform operations such as data encryption and image processing locally, and is widely used in banking or commercial handheld terminals, distance education, portable law enforcement instruments, logistics and transportation industries.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic

accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.
