The intelligent irrigation controller is an intelligent device that can automatically adjust the water supply according to the soil moisture content, crop growth needs and environmental conditions (such as climate, soil moisture, temperature, light, etc.). It receives the data collected by the sensor system through the microcomputer control unit, analyzes and judges, and then issues instructions to the actuator to achieve precise control of irrigation.

Smart agriculture is also the most active agricultural productivity in the future. Technologies such as the Internet, agricultural artificial intelligence, agricultural big data, and blockchain will enhance the intelligence level of agricultural producers' decision-making and management behaviors; agricultural sensors, agricultural robots, agricultural intelligent equipment, etc. Technology will realize the transformation and upgrading of traditional agricultural production tools; digital technology will allow us to more clearly understand and grasp agricultural production objects and their interaction with various production factors, environmental factors, technical measures, etc.
