Abstracts

According to our (Global Info Research) latest study, the global Smart Light Carpet Headlight market size was valued at US\$ 791 million in 2025 and is forecast to a readjusted size of US\$ 1854 million by 2032 with a CAGR of 13.0% during review period.

Smart Light Carpet Headlight is an advanced automotive front lighting system that integrates pixel-controlled light sources, projection optics, electronic drivers, thermal management, and vehicle software to create a continuous carpet-like light field on the road surface ahead of the vehicle. Unlike general dynamic projection headlamps that emphasize symbols, animations, and interactive graphics, this product focuses more on guiding the visible driving path, highlighting road boundaries, supporting lane-level visual cues, and improving the driver's perception of nearby ground conditions. In 2025, the capacity utilization rate was approximately 80%, and the average gross margin was around 33%. Production in 2025 totaled 1.22 million units, with an average price of USD 630 per unit. Upstream primarily consists of DMD chips and MicroLED arrays, with representative suppliers including Texas Instruments, ams OSRAM, and Nichia. The midstream focuses on optical system design, electronic driver integration, light carpet pattern control, projection algorithm development, thermal management, and vehicle-grade reliability testing. Downstream applications mainly include ICE Vehicles and NEVs, with representative customers including Mercedes-Benz, Audi, AITO, NIO, and other premium automotive brands pursuing intelligent lighting, road-surface guidance, and differentiated vehicle design.

Smart Light Carpet Headlight is better understood as a road-surface guidance product rather than a simple premium lighting option. In high-end NEVs and ICE Vehicles, its

value comes from making the driving path more visible through carpet-like illumination, lane-edge highlighting, low-speed maneuvering assistance, and welcome scenarios. As intelligent lighting becomes more connected with ADAS and cockpit functions, suppliers can build profitability through standardized optical modules, reusable light-pattern software, and model-based platform expansion. Brands that use light carpets to strengthen safety perception and exterior design identity will create clearer demand for higher-value headlamp systems.
