Smart Lock Cylinder is an intelligent electromechanical locking component that replaces or upgrades traditional mechanical lock cylinders by integrating electronic identification, motor drive, communication modules, and embedded control systems. It enables keyless access through technologies such as fingerprint recognition, RFID, Bluetooth, NFC, passwords, or mobile applications while maintaining compatibility with conventional door lock structures. The product is mainly used in residential smart locks, apartments, hotels, offices, rental housing, and commercial access control applications. The product boundary includes standalone smart lock cylinders and electronic replacement lock cores, excluding complete smart lock assemblies and access control systems.

The smart lock cylinder industry chain includes upstream suppliers of lock body materials, motors, sensors, chips, batteries, PCB assemblies, and electronic components; the midstream sector covers mechanical structure design, electronic integration, firmware development, assembly, testing, and finished product
