## Abstracts

According to our (Global Info Research) latest study, the global Smart Medical Scenario Solution Service market size was valued at US\$ 3133 million in 2025 and is forecast to a readjusted size of US\$ 6812 million by 2032 with a CAGR of 11.7% during review period.

Smart healthcare scenario solution services refer to the provision of customized digital solutions for specific medical scenarios (such as remote diagnosis, surgical assistance, ward monitoring, and personalized health management) using technologies such as the Internet of Things, artificial intelligence, big data, and cloud computing. These solutions aim to improve the accuracy, efficiency, and patient experience of medical services, and to achieve intelligent and automated medical processes.

The smart healthcare scenario solution service industry chain mainly includes three segments: upstream technology and equipment supply, midstream solution integration and platform services, and downstream medical application scenarios. The upstream segment comprises basic technology and hardware suppliers, including healthcare information software vendors, cloud computing and big data platform companies, AI algorithm companies, medical equipment manufacturers, and communication equipment companies. These suppliers provide fundamental capabilities such as servers, sensors, medical devices, data platforms, and AI algorithms, with gross profit margins typically ranging from 20% to 40%. The midstream segment consists of smart healthcare scenario solution providers, responsible for system integration, platform development, and scenario-based solution design, such as smart hospitals, telemedicine, intelligent imaging, smart nursing, and medical data management platforms. This segment has higher added value in technology and services, with gross

profit margins generally ranging from 35% to 55%. The downstream segment comprises healthcare application institutions and end-users, including hospitals, primary healthcare institutions, health check centers, elderly care institutions, and public health systems. These institutions use smart healthcare systems to digitize diagnosis, management, and services, with overall service gross profit margins typically ranging from 10% to 25%. Overall, industry profits are primarily concentrated in the midstream solution and platform service segment.

Smart medical scenario solution services not only improve the accuracy and efficiency of diagnosis and treatment, but also improve the overall patient experience by providing customized digital solutions for different medical scenarios. It promotes the intelligence and automation of medical services, brings profound changes and broad application prospects to the medical industry, and becomes a key driving force for the future innovation of health management and medical services.
