## Abstracts

The global Smart Microwave Barrier market size is expected to reach \$ 1159.2 million by 2029, rising at a market growth of 5.1% CAGR during the forecast period (2023-2029).

The smart microwave barrier is an intelligent perimeter security device. The intelligent perimeter security cable includes a cable with a signal line and a plurality of sensing devices. The multiple sensing devices are arranged on the cable along the length of the cable, and each sensing device communicates with the remote terminal through the signal line of the cable. The inductive device is provided with a transceiver integrated detector, the inductive devices form matching transceiver pairs, the transceiver pairs perform wireless communication according to the set channel, and the wireless communication signals between the transceiver pairs constitute a seamless microwave barrier. The intelligent perimeter security cable in this application is optimized to integrate the induction device, which solves the shortcomings of the existing security system, such as bulky volume, complex assembly, and low system flexibility. At the same time, the microwave barrier formed by the induction device has a high degree of concealment and will not be exposed to the outside world. The weather changes or the vibration of people and vehicles will cause false alarms, which will not cause personal injury to people who accidentally break in. The construction is simple, and it is suitable for various topography and construction environments.

This report studies the global Smart Microwave Barrier production, demand, key manufacturers, and key regions.
