Smart mobile supply chain management (SCM) software integrates functions such as procurement, procurement, manufacturing, storage, transportation and sales through comprehensive management of information flow, material flow and capital flow. It improves services to provide enhanced customer experience and optimize operating costs. The idea of smart and mobile supply chain solutions comes from deviations in the manufacturing environment, such as rising manufacturing prices, shortening product lifecycles, and shrinking manufacturing base resources. Supply chain companies are adopting top-of-the-line transportation and logistics mobility solutions, including fleet management systems (FMS), transportation management systems (TMS), trailer management

management and warehouse' management system (WMS). They use mobile apps for supply chain management to track their logistics fleet, scan RFID tags and barcodes, view and edit invoices, and measure performance. Supply chain management software with mobile integration helps organizations with vehicle inspections, deliveries, customer surveys, route planning, and task management. Mobile supply chain management enables businesses to improve productivity and customer experience, and automate delivery processes.
