Abstracts

According to our (Global Info Research) latest study, the global Smart Municipal IoT System market size was valued at US\$ 2848 million in 2025 and is forecast to a readjusted size of US\$ 4788 million by 2032 with a CAGR of 8.1% during review period.

A Smart Municipal IoT System is an intelligent system designed for the management of urban municipal infrastructure. It uses sensors, communication networks, cloud platforms, edge computing, and data analytics to monitor, control, and maintain assets such as streetlights, manhole covers, drainage networks, water supply systems, waste bins, parking facilities, road infrastructure, bridges, tunnels, and public safety equipment. The system enables real-time condition sensing, fault alerts, energy management, inspection scheduling, and data visualization, helping city authorities improve infrastructure efficiency, reduce manual inspection costs, and enhance public services and emergency response capabilities.

Smart Municipal IoT Systems will evolve toward multi-system integration, low-power wide-area connectivity, AI-driven analytics, and city digital twins. As urban infrastructure expands and cities require more refined management, isolated device monitoring will gradually shift toward unified municipal management platforms covering multiple departments and scenarios. Future systems will increasingly integrate NB-IoT, LoRa, 5G, edge computing, AI video recognition, GIS mapping, and digital twin technologies to coordinate drainage, lighting, sanitation, transportation, municipal assets, and emergency management. Low-power devices, data security, platform compatibility, remote operation, and predictive maintenance will become key competitive factors, driving smart municipal IoT from pilot projects to large-scale operation.
