Abstracts

Smart munitions refer to missiles, guided artillery shells, guided bombs and other weapon systems that use high-precision guidance systems and have a high probability of direct hits. The core part of smart ammunition, that is, the brain of smart ammunition, is its guidance system. The guidance method using navigation technology belongs to autonomous guidance. The inertial guidance device is composed of gyroscopes and accelerometers. The angular velocity and acceleration are calculated by the computer to calculate the motion attitude, orientation, running speed, position and other information of the projectile body. After comparing with the original set parameters, a guidance command is formed, and the missile is controlled by the actuator to fly to the target.

According to our (Global Info Research) latest study, the global Smart Munitions market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
