The global Smart Parking Intelligent Terminal market size is expected to reach \$ 9122 million by 2032, rising at a market growth of 7.7% CAGR during the forecast period (2026-2032).

Smart Parking Intelligent Terminal is an integrated device that applies artificial intelligence, wireless communication, GPS positioning, and mobile terminal technologies to urban parking management. It collects real-time data on parking space availability, manages parking operations, and provides users with services such as space search, reservation, payment, and navigation. These terminals often feature sensors, cameras, and connectivity modules that communicate with cloud platforms or city parking management systems to optimize parking efficiency, reduce congestion, and improve user experience. By combining intelligent algorithms with real-time monitoring, they support dynamic pricing, traffic flow analysis, and automated enforcement of parking rules, making urban parking more convenient, efficient, and environmentally friendly.

The global market for Smart Parking Intelligent Terminals has been experiencing rapid growth due to increasing urbanization, rising vehicle ownership, and the need for efficient parking solutions. These systems are widely adopted in commercial areas, government-managed public facilities, and transportation hubs such as airports, train stations, and bus terminals. The terminals not only help drivers save time in locating available parking spaces but also reduce traffic congestion and carbon emissions in densely populated cities. Technological advancements, including AI-powered analytics, IoT connectivity, and mobile payment integration, have further enhanced the adoption of smart parking terminals. Leading regions in deployment include North America, Europe, and Asia-Pacific, where urban mobility challenges drive demand for intelligent parking

infrastructure. The market is expected to continue growing, with emerging applications in residential complexes, smart cities, and mixed-use developments, indicating significant long-term potential for both hardware manufacturers and software service providers.
