Smart parking services are an integrated 'hardware + software + operation' solution centered on IoT sensors, license plate recognition (LPR/ANPR), mobile applications, and cloud platforms. This solution enables real-time monitoring of roadside and parking spaces, navigation guidance, automatic billing and settlement, reservation and sharing management, and coordinated scheduling with EV charging. Downstream applications cover municipal roadsides, commercial complexes, hospitals, transportation hubs, campuses, and communities, resulting in target occupancy rates of 70-85%, a 20-40% reduction in patrol time, and a 10-30% increase in revenue. Future development focuses on AI-driven dynamic pricing and flexible management, edge intelligence and privacy compliance, integrated EV charging and parking space scheduling, multi-site joint settlement, and the introduction of carbon reduction and resilience indicators, thereby driving the evolution of parking management services towards intelligence, greenness, and efficiency.
