## Abstracts

The global Smart Pet Health Monitor market size is expected to reach \$ 599.4 million by 2029, rising at a market growth of 4.8% CAGR during the forecast period (2023-2029).

With the increasing number of pet owners worldwide, the demand for such devices is expected to grow significantly in the coming years.

The device is designed to track various health parameters of pets, including their activity levels, heart rate, respiratory rate, and body temperature. It can also monitor the pet's sleeping patterns, which can help detect any underlying health issues.

The Smart Pet Health Monitor is expected to be particularly useful for pet owners who have busy schedules and cannot always be present to monitor their pet's health. The device can send alerts to the owner's smartphone if any abnormal readings are detected, allowing them to take timely action.

The device is also expected to be useful for veterinarians, who can use it to monitor the health of pets remotely. This can help reduce the number of visits to the clinic, making it more convenient for pet owners and reducing the workload of veterinarians.
