## Abstracts

Smart pill technology is a revolutionary technological innovation that has reduced the gap between healthcare and digital technology. Smart pills or Nootropics are basically medical devices and small embedded electronic appliances such as sensors, cameras and trackers. This electronic device can be easily swallowed and provides complete evaluation of the gastrointestinal tract (GIT). The emergence of these healthcare-cum-technology devices has addressed the soaring need of better diagnostics and monitoring. It has outperformed the conventional GI monitoring endoscopy with more convenient smart pill technology, which has now become the standard non-invasive diagnosis technique for motility disorders. Moreover, it helps physicians in real-time patient monitoring through remote controlling options.

According to our (Global Info Research) latest study, the global Smart Pills Technology market size was valued at USD 465.4 million in 2022 and is forecast to a readjusted size of USD 997.4 million by 2029 with a CAGR of 11.5% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The global smart pills technology market is expected to register a substantial growth in the future, owing to the increased prevalence of gastrointestinal diseases (such as motility disorders, colon cancer, obscure gastrointestinal bleeding and Crohns disease), sedentary lifestyle and high patient compliance on account of minimally invasive techniques.
