A smart projector is a device that combines the functionality of a traditional projector with additional smart features. It typically integrates wireless connectivity, built-in operating systems (such as Android or iOS), streaming capabilities, and app support. This allows users to not only project images and videos onto a screen or surface but also access and display content from various sources like streaming services, apps, and the internet. Smart projectors often have built-in speakers, support for voice commands, and connectivity options like Bluetooth and Wi-Fi. They can be controlled and operated using a remote control, smartphone, or voice control, offering a more versatile and interactive multimedia experience.

Global key players of Smart Projector include JMGO, XGIMI, Epson, Optoma (Coretronic), Acer, etc. The top five players hold a share over 36%. Asia-Pacific is the largest market, and has a share about 45%, followed by North America and Europe with share 25% and 23%, separately. In terms of product type, DLP Technology is the largest segment, occupied for a share of 45%. In terms of application, Offline has a share about 53 percent.
