According to our (Global Info Research) latest study, the global Smart Runway market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Smart Runway is equipped with AI intelligent recognition system. With face recognition technology, it is able to automatically recognize users without the need for additional identity verification, allowing exercisers to maintain convenience and smoothness while running. Secondly, the Smart Runway is also equipped with a data collection device, which is able to record a number of data in real time when exercisers are active, such as the length of exercise, speed, mileage, and calories burned. These data will be transmitted to the backend system to provide fitness data for each exerciser, which will help them exercise scientifically. In addition, the Smart Runway can also display the results of big data analysis on the big screen in real time, such as exercise charts, statistical charts of exercise modes, passenger flow, cumulative total length, total mileage, male/female ratio and age distribution. This interactive data display not only enhances the sense of participation in exercise, but also promotes the socialization of fitness activities, making people more willing to integrate into healthy exercise.
