The global Smart Scenic Spot System market size is expected to reach \$ 639 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

Smart Scenic Spot System refers to an integrated digital management system that uses technologies such as IoT, cloud computing, big data, artificial intelligence, mobile internet, e-ticketing, video surveillance, and location-based navigation to manage scenic spot operations. It covers ticket reservation, admission control, smart tour guidance, visitor flow monitoring, security and emergency response, parking management, marketing operations, and business analytics. The system improves the visitor experience through convenient ticketing, navigation, information services, and interactive functions, while helping scenic spot operators enhance operational efficiency, safety management, visitor flow control, and commercial decision-making.

The Smart Scenic Spot System market is moving from basic ticketing and tour guide functions toward integrated visitor service, full-scenario operation management, and data-driven decision-making. With the growth of cultural tourism consumption, reservation-based entry, contactless admission, precise marketing, and safety management requirements, scenic spots are increasingly adopting online ticketing, visitor flow forecasting, visitor profiling, membership management, intelligent navigation, emergency command systems, and cross-platform data integration. In the future, AI video analytics, digital twins, AR/VR tour guidance, unmanned service devices, and smart parking will further strengthen the role of smart scenic spot systems as core platforms for improving visitor experience, increasing secondary consumption, and enhancing operational efficiency.
