Abstracts

The global Smart Streetlight Gateway market size is expected to reach \$ 147 million by 2032, rising at a market growth of 4.3% CAGR during the forecast period (2026-2032).

In 2025, global sales of Smart Streetlight Gateway reached approximately 0.5 million units, with an average market price of about USD 210 per unit, an annual production capacity of roughly 0.65 million units, and an industry-average gross margin of approximately 30%.

A Smart Streetlight Gateway is the pole-side or edge-side communication and control hub deployed in a smart pole or smart street lighting system. It connects lighting controllers, cameras, environmental sensors, LED displays, public broadcast units, emergency call devices, chargers, and Wi-Fi/5G equipment into one network, while handling protocol conversion, edge computing, remote O&M, cloud connectivity, and multi-department platform linkage. In market statistics, it should be counted as industrial communication and edge-control hardware within the smart pole system, rather than the whole pole, luminaires, or upper-layer software platform.

Upstream, the product relies mainly on communication chips and modules (4G/5G, LoRaWAN, Wi-Fi), industrial CPUs/MCUs, memory, PCBs, power and PoE modules, antennas, interface components, waterproof enclosures, and embedded OS/firmware. The midstream consists of gateway OEMs, industrial networking vendors, and smart pole solution providers. Downstream, the main users are municipal lighting projects, smart-city EPC contractors, campus/park/scenic-area operators, traffic and public-security authorities, and urban O&M platforms. In the value chain, the gateway sits at the core of ?multi-device access + edge processing + platform coordination?: it sources electronic and communications components upstream and enables integrated

applications downstream such as lighting management, video surveillance, environmental sensing, information release, public broadcast, emergency calling, and EV charging.
