According to our (Global Info Research) latest study, the global Smart Toilet Complete Solution market size was valued at US\$ 139 million in 2025 and is forecast to a readjusted size of US\$ 272 million by 2032 with a CAGR of 10.3% during review period.

A complete smart toilet solution refers to an integrated intelligent system encompassing the 'construction + management + service' of public restrooms. It typically includes modules such as intelligent toilet stall guidance and occupancy monitoring, air quality and odor monitoring, automatic flushing and water-saving control, smart lighting and ventilation, passenger flow statistics and cleaning scheduling, an unattended operation and maintenance platform, and integration with city/park integrated management platforms. By linking IoT sensors, cameras, smart terminals, and middleware software, the system enables real-time display and guidance of toilet stalls, automatic activation of fans/sprayers when odors or humidity exceed standards, automatic early warning of consumable inventory and malfunctions, on-demand cleaning dispatch, and visualization of usage data. This significantly improves the hygiene level, user experience, energy efficiency, and management efficiency of public toilets, and is suitable for scenarios such as urban public toilets, highway service areas, scenic spots, transportation hubs, and large commercial complexes.

From the perspective of demand and policy, complete smart toilet solutions are transforming from 'image projects' into a niche market characterized by 'rigid expenditures + long-term operation and maintenance'. On the one hand, policies such as refined urban governance, the creation of civilized cities, the 'toilet revolution,' and the assessment of service quality in tourist attractions have incorporated the quantity, cleanliness, and intelligent management level of public toilets into the assessment

indicators of governments at all levels. This has led to a significant increase in demand for 'location-based, navigation-based, and evaluable' smart public toilets in highway service areas, transportation hubs, scenic spots, and large parks. On the other hand, traditional public toilets rely on a 'manual inspection + cleaning experience' model, which struggles to maintain a stable experience under fluctuating high visitor traffic. Odor complaints, facility damage, and shortages of toilet paper/consumables are frequent pain points. This provides a clear value anchor for a 'sensor + platform + operation and maintenance service' integrated solution?as long as quantifiable improvements can be made in 'complaint rate, cost per cleaning, energy consumption, and water consumption,' local governments and operators are often willing to accept a combination of initial equipment investment and subsequent service fees.

From a supply and business model perspective, smart toilets are less like a one-time equipment sale and more like a 'lightweight urban IoT node + operation and service entry point.' Price competition in the underlying hardware (smart terminals, sensors, door locks, displays) is already quite fierce. The real room for negotiation lies in: the ability to interface with urban management platforms/park IoT platforms, data dashboards and operational evaluation models, and SaaS services surrounding cleaning scheduling, consumable replenishment, and energy consumption optimization. Some manufacturers are no longer simply integrating 'public toilet screens + sensors,' but are simultaneously undertaking the renovation and management of several public toilets in urban areas, scenic spots, or highway sections. They offset their initial capital expenditure by charging service fees per toilet stall/toilet quantity plus value-added data services (customer flow analysis, advertising, mini-program traffic redirection). In the medium to long term, whoever can integrate smart toilets into a larger, unified 'urban space service' framework?connecting with public signage, advertising media, parking, cultural tourism guidance, and the city's brain data platform?has the opportunity to upgrade from a single-project contractor to a part of a regional public space operator, gaining more stable renewal fees and cross-project replication space.
