## Abstracts

The global Smart Trailer System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The smart trailer system is a system that uses IoT, cloud computing, big data, and other technologies to monitor and manage trailers in real time. By installing sensors, location trackers, cameras, and other devices on the trailer, the system collects and processes data on the trailer's operating status, location information, cargo status, driver behavior, etc., and transmits it to the cloud platform for analysis and processing. Through the analysis of this data, the intelligent trailer system can achieve various functions, such as improving transport efficiency, reducing operating costs, increasing operational safety, and enhancing customer service levels. Additionally, the system can quickly diagnose and repair trailer faults and carry out preventive maintenance, reducing economic losses and safety hazards caused by vehicle malfunctions. The intelligent trailer system has been widely applied and has even more significant development prospects in the future.
