Abstracts

The global Smart Turbo Trainers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Unlike non-smart trainers, the smart versions feature software like ANT+ and Bluetooth, collecting feedback and offering two way interactions with smartphones and computers. This allows a plethora of extra capabilities: everything from being able to set your trainer's resistance to a certain level via your mobile phone to the trainer mimicking a ride's profile that you see on your computer.

Smart trainers serve the same goal as regular trainers: they allow you to complete a focused training session on your own bike, in the comfort of your home. The difference is that a smart trainer hooks up to other tech like computers and smart phones to help you get more from your workout.

This report studies the global Smart Turbo Trainers production, demand, key manufacturers, and key regions.
