Abstracts

Ultrasonic welding is the joining or reforming of thermoplastics or other materials through the use of heat generated from high-frequency mechanical motion. It is accomplished by converting high-frequency electrical energy into high-frequency mechanical motion. That mechanical motion, along with applied force, creates frictional heat at the plastic or other materials components' mating surfaces (joint area) so the material will melt and form a molecular bond between the parts.

According to our (Global Info Research) latest study, the global Smart Ultrasonic Welding Machine market size was valued at USD 169.8 million in 2022 and is forecast to a readjusted size of USD 212.4 million by 2029 with a CAGR of 3.3% during review period.
