## Abstracts

According to our (Global Info Research) latest study, the global Smart Water Management market size was valued at USD 3017.8 million in 2023 and is forecast to a readjusted size of USD 5315 million by 2030 with a CAGR of 8.4% during review period.

A smart meter is usually an electronic device that records consumption of electric energy in intervals of an hour or less and communicates that information at least daily back to the utility for monitoring and billing. Smart meters enable two-way communication between the meter and the central system. Unlike home energy monitors, smart meters can gather data for remote reporting. Such an advanced metering infrastructure differs from traditional automatic meter reading in that it enables two-way communications with the meter.
