## Abstracts

The global Smart Wearable Anti-snoring Device market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Smart Wearable Anti-snoring Device is a new type of medical device designed for people suffering from sleep apnea syndrome or mild to moderate breathing disorders. The device is usually worn on the sleeper's head or face, and detects the sleeper's breathing and snoring through sensors, and analyzes the data through intelligent algorithms, so as to take corresponding treatment measures. When the device detects snoring, it will prompt the sleeper to adjust the head position or breathing method through weak vibration or sound, so as to achieve the effect of reducing snoring and improving breathing. In addition, the smart wearable anti-snoring device can also record sleep data in real time through the mobile APP, such as sleep time, breathing rate, number of body turns, etc., to help sleepers better understand their sleep quality. The use of this smart device can relieve sleep breathing problems and improve sleep quality without the need for drugs or surgery.
