SMC composite battery housing is a battery housing made of SMC material, which is a composite material made by a compression molding process. SMC is a glass fiber, carbon fiber or other reinforcement material pre-impregnated with resin, commonly used in automotive, electrical and construction materials. This material and structural design is designed to meet the stringent requirements of battery housings in terms of mechanical properties, cost-effectiveness, lightweight, and electromagnetic interference (EMI) shielding and flame retardant properties. The development and application of SMC composite battery housings is an important direction for lightweighting and improving safety in the electric vehicle industry. By using different reinforcement materials and resin matrices, the housing can be customized to meet specific performance requirements. As the electric vehicle market continues to grow, the demand for this high-performance composite material is expected to continue to increase.
