## Abstracts

According to our (Global Info Research) latest study, the global SMC Composite Cable Trough market size was valued at US\$ 329 million in 2025 and is forecast to a readjusted size of US\$ 479 million by 2032 with a CAGR of 5.3% during review period.

SMC (Solid Molding Compound) cable ducts are cable management products made of sheet molding compound (SMC), possessing high strength, corrosion resistance, flame retardancy, and excellent insulation properties. These products are widely used in railway, highway, power system, substation, and urban infrastructure construction for cable protection and installation. Compared to traditional concrete or metal cable ducts, SMC cable ducts are lighter, easier to install, and have a longer service life. The upstream of the SMC cable duct industry chain includes raw materials such as glass fiber, unsaturated polyester resin, fillers, and additives. The midstream consists of manufacturing companies that produce standardized or customized products through molding, curing, and post-processing. Downstream applications cover railways, power transmission and distribution, telecommunications networks, and municipal engineering, while also providing installation, structural design optimization, and maintenance services to ensure the safety and long-term stable operation of cable systems. In 2025, the global production of SMC cable ducts was approximately 3,765 kilometers, with an average market price of approximately US\$85 per meter. The gross profit margin of major companies in the industry ranges from 25% to 40%. The global production capacity of composite material (SMC) cable troughs is estimated to be 5,020 kilometers in 2025.
