Abstracts

According to our (Global Info Research) latest study, the global SMC Mould market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

SMC molds are made using a compression process, by compressing the SMC material into the final product. SMC molding usually uses a hydraulic press, with the cavity and core fixed on the upper and lower pressure plates. When the material is placed into the open mold, the platen is closed, the mold is heated, and the pressure then forces the SMC material to flow throughout the mold.

The SMC is sheet molding compound, the main raw material is composed of special yarn, unsaturated resin, low shrinkage additive, filler and various auxiliary agents. The SMC has the advantages of superior corrosion resistance, softness, easy engineering design, and flexibility. Its mechanical properties are comparable to some metal materials. The products it manufactures have the advantages of good rigidity, deformation resistance, and wide operating temperature range. At the same time, the size of SMC products is not easily deformed and has excellent heat resistance; it can maintain its performance well in cold and hot environments, and is suitable for outdoor UV resistance and waterproof functions. SMC mold products have the advantages of light weight, energy saving and emission reduction, and can meet the requirements of modern society for environmental protection and sustainable development.
