According to our (Global Info Research) latest study, the global SMD Directional Coupler market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The working principle of the SMD directional coupler is based on the coupling effect of microwave transmission lines and is suitable for microwave frequency bands. Its operating frequency range can range from hundreds of megahertz to tens of gigahertz. It should be noted that the selection and use of SMD directional couplers needs to consider factors such as their operating frequency, insertion loss, coupling degree, and isolation degree to meet the needs of specific applications.

The SMD directional coupler is a surface-mount packaged microwave device used to couple microwave signals from one input port to one or more output ports. It is usually manufactured using a ceramic substrate and metal layer, which has the advantages of small size, lightweight, and high performance.
