## Abstracts

According to our (Global Info Research) latest study, the global SMD Patch Antenna market size was valued at US\$ 949 million in 2024 and is forecast to a readjusted size of USD 1376 million by 2031 with a CAGR of 6.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

SMD patch antenna is a miniaturized surface mount device (Surface Mount Device) based on microstrip antenna technology. It is composed of a multi-layer dielectric substrate (such as ceramic, FR4 or high-frequency PCB material) and a metal radiation patch. It realizes signal reception and transmission in a specific frequency band through the resonance of the electromagnetic field between the patch and the ground layer. Its core features are low profile, lightweight, and easy integration. It supports high-frequency bands (such as 5G millimeter waves, Wi-Fi 6E) and multi-band coverage. It is widely used in wireless communication modules of compact electronic devices. It needs to be designed in coordination with impedance matching and RF circuits to optimize radiation efficiency and gain.
