According to our (Global Info Research) latest study, the global SMD / SMT Inductors market size was valued at US\$ 2564 million in 2025 and is forecast to a readjusted size of US\$ 4002 million by 2032 with a CAGR of 6.5% during review period.

An inductor is a passive component that stores energy in a magnetic field when current flows through it. It resists changes in current and is used in various applications, such as filtering signals, energy storage in power supplies, and providing inductance in RF circuits. In simpler terms, inductors 'smooth out' electrical signals by preventing sudden changes in current.

SMD stands for Surface-Mount Device, and SMT stands for Surface-Mount Technology. These terms refer to components designed to be mounted directly onto the surface of printed circuit boards (PCBs) rather than being inserted into holes on the board. SMD Inductors (or SMT Inductors) are a specific type of passive electronic component used in circuits for energy storage, filtering, and signal processing.

SMD / SMT inductors are essential components in modern electronics due to their compact size, high efficiency, and versatility in power management and signal filtering. They are widely used in consumer electronics, automotive electronics, telecommunications, and many other industries.
