Abstracts

According to our (Global Info Research) latest study, the global SMD Type Zener Diode market size was valued at US\$ 838 million in 2024 and is forecast to a readjusted size of USD 1141 million by 2031 with a CAGR of 4.6% during review period.

A zener diode is used for regulating voltage in practical circuit applications. This semiconductor device permits the flow of current in a unidirectional way. Provided with sufficient voltage, they allow the flow of current in the opposite direction as well. The excess voltage required for reversing the direction of flow of current is termed as breakdown voltage or Zener voltage. The major role of a Zener Diode is to function as a voltage regulator. It is fairly employed in many electrical and electronic tools and equipments. The Zener Diode varies in a wider range based on its mounting location. Most of them are either mounted onto a surface or found in holed components. The surface mount Zener Diodes are directly mounted on a printed circuit board. This report focus on the SMD Type Zener Diode.

The growing use of electronic devices such as television, mobile devices, electric vehicles, etc., boosts Zener diode market development. Zener diodes are used in voltage regulators, reference elements, surge suppressors, switching applications, and clipper circuits. The adoption of different government efforts on modern power distribution and generating infrastructure are projected to drive the market forward.
