According to our (Global Info Research) latest study, the global SMD Unshielded Power Inductor market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

SMD unshielded power inductors are surface mounted unshielded power inductors that are widely used in power supply circuits for electronic devices. Compared with closed power inductors, open inductors do not have an additional shielding layer and therefore may have lower cost and simpler construction. They are suitable for SMT processing and can be reflow soldered for automated production. Depending on the specific model, they can support different ranges of currents and have low DC resistance (DCR), helping to reduce power losses and improve power supply efficiency.
