Abstracts

Somke Pressure Systems help in restricting the spreading of smoke to nearby areas by maintaining the pressure within the escape route, which is usually higher than that in the adjacent spaces.

According to our (Global Info Research) latest study, the global Smoke Pressure System market size was valued at USD 374.3 million in 2022 and is forecast to a readjusted size of USD 450.4 million by 2029 with a CAGR of 2.7% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Differential pressure systems can be used in buildings, staircases and landings, anterooms, corridors and fire brigade elevator shafts to create a security zone. Like this the objective to support self-rescue and fire-fighting can be fulfilled. Physically simplified, differential pressure systems realize an appropriate overpressure at the door top edge between the area on fire and the pressure area (staircase and landing), which prevents or delays the smoke entry from the area on fire.
