A smoke sampler is a device used to collect samples of smoke for analysis. It is commonly used in industrial settings to monitor air quality and ensure compliance with environmental regulations. The device works by drawing air through a filter, which captures particles and other contaminants in the smoke. The filter can then be analyzed in a laboratory to determine the composition of the smoke and identify any harmful substances present. Smoke samplers are an important tool for maintaining safe and healthy working environments, and for protecting the environment from harmful pollutants.
