According to our (Global Info Research) latest study, the global Smoked Bacon market size was valued at USD 9466.3 million in 2023 and is forecast to a readjusted size of USD 12720 million by 2030 with a CAGR of 4.3% during review period.

Smoked Bacon is a kind salt-cured pork. Bacon is prepared from several different cuts of meat, typically from the pork belly or from back cuts, which have less fat than the belly. It is eaten on its own, as a side dish (particularly in breakfasts), or used as a minor ingredient to flavour dishes. Hot smoked bacon is salt brining or dry salt curing, then cooking a cured pork belly with some smoke being involved. Versus cold smoking which is drying with cold smoke and intensifying the flavor.

The increasing interest of consumers over innovative and flavored meats is playing a significant role in the rising popularity of smoked bacon and ham in developing economies such as India, Philippines, and others. Furthermore, consumers' daily schedules have become hectic over the years, necessitating a lifestyle change to tackle the daily chores. Consumers' hectic schedules are compelling them to adopt the consumption of processed meals to save time. On the other hand, smoked bacon and ham manufacturers are developing high-quality products that are grabbing customers' attention. People have become more aware of the concerns associated with consuming chemically processed meat products in recent years, as they may be a source of nitrates and nitrites. As a response, firms have produced nitrates-free bacon and ham, which encourages people to enjoy meat products in the market.
