Abstracts

The global SMT Red Glue market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

SMT red glue is certain type of temperature-set adhesive that is used during the SMT process to fix certain components to the board in circumstances where they might lose connection or fall off before solder reflow takes place. Due to the fact that the viscosity, fluidity, wetting and other properties of the adhesive red glue are affected by temperature, it should be used under certain special conditions.

SMT red glue is a kind of polyene organic compound. Compared to solder paste, the red glue will cure after it is heated. Its curing point is 150?, after this, it immediately changes from paste to solid. Its outstanding curing speed, high heat-resistivity, and excellent electric properties make this a vital component in soldering. It is ideal for processing SMT series during wave soldering processes.
