According to our (Global Info Research) latest study, the global SMT Stencil Printer market size was valued at USD 410.2 million in 2022 and is forecast to a readjusted size of USD 557.1 million by 2029 with a CAGR of 4.5% during review period.

Stencil Printing or solder paste printing is a key part in the SMT (Surface Mount Technology) process. Since the solder paste is a mixture of powder and flux, it is fluid during the printing process. Viscosity is a major indicator of the form of solder paste fluids. If it has low viscosity, it flows easily for filling and collapses. If it has high viscosity, it is easy to roll, peel and form. The viscosity requirement is also different at different stages of solder paste printing. SMT has a flexible requirement of viscosity but fortunately viscosity itself is a variable that is easy to change. This requirement of varying viscosity places a higher dependence on the solder paste printing process and the printer's parameter settings.

Global key players of SMT Stencil Printer include GKG, ASM Pacific Technology and ITW EAE, etc. The top three players hold a share about 65%. China is the largest market, has a share about 50%.
